

Title**WHOLE GRAIN CORN ALONE LEVELS BLOOD SUGAR****Abstract**

A novel use of whole grain corn alone, to level blood sugar is what this invention is all about. 30-35 grams, eaten in 5 gram portions, 6-7 times a day, about 3 hour intervals, the last one before going to bed is the day's therapy. Whole grain corn is modified for good human consumption. This invention uses 2.

1. soaked in water until chewable.
2. grinding into 3 distinct fineness, fine, medium fine and coarse 2 millimeters in diameter.

Diabetics using the products of this invention have a 24 hour safety net guarding against too high or too low sugar level. Sweeteners and flavoring can be used in the processed product, but never compromise the purity and integrity of the invention; whole grain corn alone levels blood sugar.
